ASSISTANT COMMISSIONER FOR PATENTS
WASHINGTON, D.C. 20231
Crystal Plaza 3, Jefferson Davis Highway,
Arlington, Virginia

The accompanying documents are an application for grant of patent rights. We, the applicants, have drafted this application without the use of an attorney. Hopefully it fully meets the requirements of your office.

The application is in the field of construction machinery and more particularly rock and ore crushing or rock processing. The name we have given our device is: VERTICAL SHAFT IMPACTOR WITH SUSPENDED IMPELLER.

A check for the amount required, that we calculated, is enclosed; if incorrect we assume we will be notified.

We don't have a docket number. Since 1950 I, Louis Johnson, have been granted numerous patents with the use of attorneys; unfortunately the attorney we would have used is deceased, and fees of present attorneys are higher than we can afford. However, the USPTO has assigned a Customer Number to me; it is 35906. I and Bruce G. Johnson, my son, filed for a patent on another type of rock crusher last August 23, 2002, Application Number 10/225,778; we assume the assigned number, 35906, was given because of that first patent application.

Respectfully,

A handwritten signature in black ink, appearing to read "Louis W. Johnson".

Louis W. Johnson
